

About Us

We offer a domestic, commercial and industrial electrical service, and more recently the design and installation of home automation systems. Home automation is a unique solution, that at the touch of a button, uses an intelligent management system to provide whole-house control of all electrical devices including interactive controlled lighting, multi room audio and visual, home cinema and security systems ranging from CCTV to door entry.

You the customer have a vision of what you want to achieve, we have the knowledge and expertise to provide the solutions. We offer the complete electrical service including site surveys, design, installation and maintenance. Whether your requirements are basic or high spec, local or national, we shall endeavour to ensure that you remain satisfied with our service and your finished product. We have a number of repeat and satisfied customers, some of which we have gained through referral and recommendation.

The safety of your environment is of primary concern. We offer free estimates and electrical advise on how to upgrade and maintain the electrical safety of your home or business environment, to ensure that you comply with health and safety regulations. We are fully accredited with the NICEIC.

If you require further information and would like to know more about our services, please visit our website for future news and updates. If you would like a news letter service please visit our contacts page. Please do not hesitate to contact us directly or via our web based enquiry form on our contacts page.

We look forward to hearing from you.

Home / Commercial Automation

What is Home / Commercial Automation?

Home automation is a unique solution that, at the touch of a button, uses an intelligent management system to provide whole-house control of all electrical devices including controlled interactive lighting, multi room audio and visual, home cinema and security systems ranging from CCTV, automated shutters and gates to door entry. These systems can also be applied to commercial premises.

Through our consultation, design and installation service we are able ascertain your requirements, and consequently offer you the solutions to your technology headaches. We customise our systems to satisfy your tastes and needs, ensuring that they are fully integrated into the fabric of your home.

Home automation will add significant value to your home and, like an internet connection, this technology is becoming an expected feature in every quality home. Our modular systems offer future proof technology and are also available in retro fit.

So relax and let home entertainment systems and interactive mood lighting appeal to your senses and bring pleasure into your home at the touch of a button.

Automation & Security

Your house is your home. It is the place where you want to feel secure, at ease, where you enjoy privacy and comfort. A home automation system allows you to control your entire electrical system

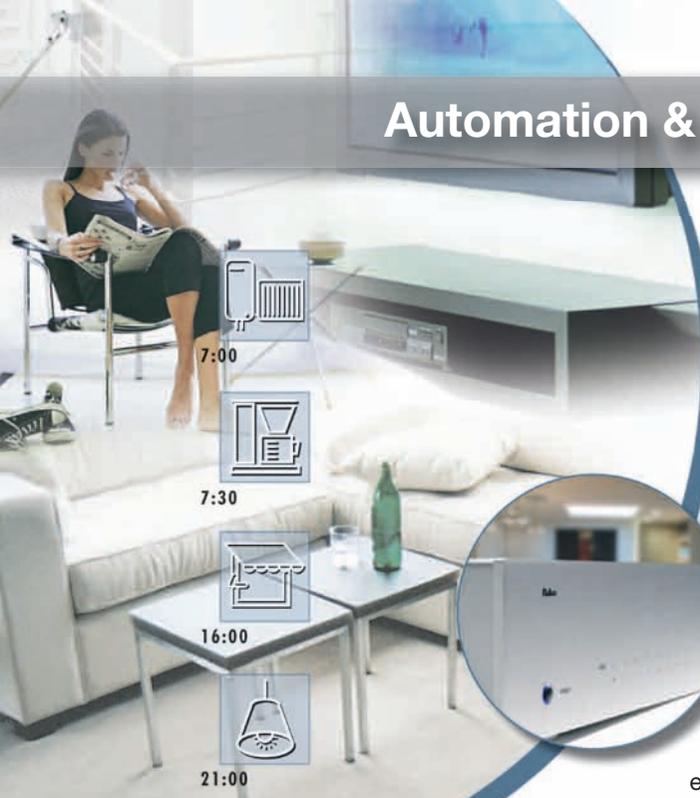

including your heating hot water and lighting. With the simple press of a button, you can switch off all electrical appliances.

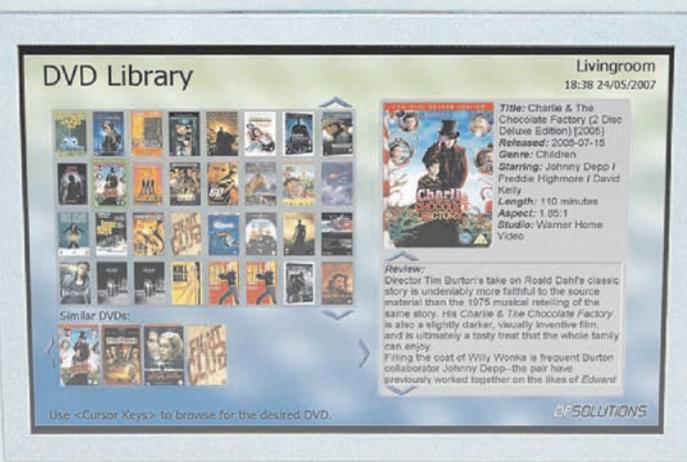

From the comfort of your bed you can switch off lights (indoors and out), close blinds and automated gates.

Your security is of primary concern. Door entry systems allow you to decide whether or not to let your visitor in. You can see who is at the front door on any internal visual display screen, and communicate via a hand set, intercom, and mobile phone.

CCTV cameras are set up around your property, footage is then recorded to hard disk. This can be accessed in real time via the internet or Smart phone from any international location

The SMS module system guards your home and warns you in the case of water damage, breaking – in, smoke, motion, and increases your feeling of safety, even when you are not at home. An SMS message informs you on the type of alarm.

Multiroom
audio - visual

Multiroom audio - visual

Imagine being able to access all your music, photos, movies and TV from any room in your home. Discreet plaster-in-wall flat panel speakers and slimline LCD or plasma screens designed to integrate into the fabric of your contemporary or traditional home, will all be connected to a discreet media server, and controlled by wall keypads or remote controls.

This convenient system allows playback to be independent of every other room, meaning you will be able to listen and view photos, music and movies when you want, where you want, whenever you want!

Home cinema

- Create escapism in the comfort of your own home.
- Select your chosen movie from your media server.
- Speakers, a projector screen and controlled volume and lighting allow you to indulge in the full cinema experience at the touch of a button.
- Automated curtains, blinds and screens can also be integrated into your home cinema.

Controlled Lighting

Lighting is essential for setting the scene in any room in your home, and is fundamental to your interior design. Create mood and ambience through the use of sophisticated interactive dimming technology or orientation lighting. You can integrate this technology in your lounge or home cinema with automated curtains, blinds and screens into one single wall panel.

Your lighting will have the ability to operate intelligently by coming on at set times when you are away and illuminate ready for when you arrive home. You will be able to monitor and control all your lighting from one panel.

Your lighting will then become a security feature and can be linked to your security system.

Lighting can be integrated into the wall along the stairway or as passage lighting in the hall. These lights are a very useful orientation aid. Orientation lighting is not only functional, it is also a decorative element in your interior design.
